

A totally integrated solution for Agricultural and Animal Husbandry installations.

AgriSafe™ uses **patented H₂Ozone Technology** to accurately control a naturally self-disinfecting supply of **Pure Ozonated Water** for:

- **Livestock and Hydroponic Cultures**
- **Dairy and Veterinary Facilities**
- Water can be sourced from wells, surface water, boreholes, your own rain-harvesting system or municipally supplied water.
- **AgriSafe™** – the only **chemical-free** water purification system available that inactivates all pathogenic organisms from your water supply, including ***E.coli*, *Salmonella*, *Legionella* and *Campylobacter*** bacteria, AND the ***Cryptosporidium*** oocyst.

Poultry – the unique benefits of AgriSafe™

- Livestock require a significant **reduction in antibiotic & probiotic treatments** without any negative effects.
- Chick mortality rate **below 3%** with faster growth rates.
- Drinking water stays fresher for longer.
- Healthier, happier livestock with calmer flocks of birds and higher yields of meat.
- Reduced gestation, leading to additional crops per annum.
- Economical – one 'AgriSafe™' machine for approximately 15,000 birds.
- Significant improvement in financial margins and profits.
- Break-even within 1 year.
- Significant reduction in compromised meat and egg output.

Healthy, hydrated birds

Testimonials from satisfied AgriSafe™ customers

“ We have recommended the Agrisafe machine to a number of farms and the results have been astounding. It does exactly what it promises to do in an extremely cost effective way - and the return on investment is recovered well within a year.”

Trusted Water Solutions - Irish National Distributor

“ We were delighted with the improved performance results, particularly the increased financial gains. The system was easy to install and use. The Agrisafe process is now used throughout our farm.”

Maurice McCarron, Kilacorn Poultry Limited

“ The controlled use of Ozone in water is an effective measure for the control of Campylobacter and also improvement of health and productivity of broilers. So Ozone treatment improved FCR.”

Bristol University, United Kingdom
